Regulatory Update – Vietnam

New EMC Requirements to be introduced for Radio Broadband Data Transmission Equipment

The Ministry of Information and Communications (MIC) in Vietnam has recently released a new national standard - QCVN112:2017/BTTTT - equivalent to EN301489-17 V2.2.1 (2012-9). This new national standard will come into effect on 1st July 2018.

The new national standard will cover the following product types:

- Radio communication equipment using spread spectrum modulation in the 2.4GHz band
- Radio access equipment operating in the frequency bands 5150-5350 MHz, 5470-5725 MHz and 5725-5850 MHz
- High-speed radio access equipment, operating in 57-66GHz
- BWA / WiMAX broadband radio access equipment in both TDD and FDD modes

Although there are currently no official guidelines in place for this new standard, PCS do not currently foresee any impact on already-Approved devices before the new standard is implemented. PCS anticipate that additional testing will be needed for all affected product types for both New and Renewal Approvals after 1st July 2018.

A copy of the new standard can be located below. The text is in Vietnamese language only:

http://mic.gov.vn/Pages/VanBan/14007/18_2017_TT-BTTTT.html.

PCS will continue to monitor any developments and further updates will be provided once additional information is obtained.
