Regulatory Update - Paraguay

915-928MHz band is now closed

The Paraguayan Authority, *Comisión Nacional de Telecomunicaciones (CONATEL)*, has recently advised that the 915-928MHz band is no longer permitted for spread spectrum devices due to incidences of interference.

It is understood that products which have already obtained Type Approval in Paraguay, and which operate on the 915-928MHz band, can continue to operate until the existing Type Approval certificate reaches its expiry date. This has not yet been confirmed by CONATEL, however PCS are working with our in-country contacts to confirm this information.

For future Type Approval applications for products which operate in the 915-928MHz band, PCS are investigating the possibility to approve such devices in the 865-868MHz band instead. PCS are awaiting confirmation on this point and a further regulatory update will be provided shortly.

For additional information regarding this alert, please contact:
